Кафедра программного обеспечения вычислительнойтехники и автоматизированных систем

Лабораторная работа № 13

По дисциплине Основы программирования По теме: «Множества»

Выполнил: ст. группы КБ – 231

Давыденко Кирилл Иванович

Проверили: Черников Сергей Викторович Новожен Никита Викторович **Цель работы:** закрепление навыков работы со структурами, изучение простых способов представления множеств в памяти ЭВМ.

Вывод: в ходе выполнения лабораторной работы мы успешно закрепили навыки работы с структурами данных и изучили простые способы представления множеств в памяти ЭВМ. Работа с структурами позволяет нам организовывать данные таким образом, чтобы обеспечить удобство и эффективность их обработки. Изучение способов представления множеств в памяти ЭВМ дало нам понимание того, как компьютер хранит и обрабатывает информацию о множествах, что является важным аспектом в разработке программного обеспечения. Эта лабораторная работа помогла нам не только углубить знания о структурах данных, но и понять, как они используются на практике для решения конкретных задач. Мы убедились в важности эффективного управления данными и их представлении для создания эффективных и мощных программ. Благодаря этой работе мы теперь осознаем, что понимание работы со структурами данных и способами представления множеств помогает нам стать более компетентными программистами и решать задачи более эффективно.
